

ELIMINATOR™ II SERIES

SOFT-SIDED SHELTERS

FULL-ACCESS LOADING AT THE LOWEST LIFETIME COST.

Four ways to cut your costs and boost your profits.

Eliminate High Repair Costs

Errant trucks won't hurt ELIMINATOR™ II Series shelters. Flexible, poly-wrapped foam side frames absorb impact without sustaining damage. Stable, slim-profile design provides ultimate side frame durability and flexibility.

Eliminate Troublesome Bumpers

Steel dock shelter bumpers can damage trailers and your building wall, resulting in costly repairs. With impactable ELIMINATOR II shelters, there's no need for these types of bumpers.

Eliminate Delays and Product Damage

ELIMINATOR II Series shelters provide full-width access to loads. As a result, materials can be loaded and unloaded quickly and efficiently.

Eliminate Energy Loss

ELIMINATOR II Series shelters provide an effective weather barrier regardless of trailer type. Side curtains maintain a tight wiper seal. Adjustable head curtains accommodate the full range of trailer heights. An innovative design provides a snug lower corner seal. Even liftgate trailers are no problem. And for maximum energy efficiency, you can cover the hinge gaps in swing-out trailer doors.

No more load obstructions. No more damaged shelters.

Choosing environmental protection for your docks used to mean tradeoffs. Foam pads provided the best weather seal, but could obstruct access inside trailers.

Shelters provided unrestricted load access, but if just one truck backed in off center – CRUNCH! Smashed shelter frame, a big bill for repair or replacement, and a dock position left unprotected until repairs were made.

Now there's a solution: ELIMINATOR™ II Series impactable, soft-sided dock shelters.

Have It All. Unobstructed Loading. Energy Savings. Long Shelter Life.

The ELIMINATOR II Series gives you the best of all worlds. It provides full load access and an effective weather seal. And it's built to take a hit and bounce right back.

With three models to choose from, you're sure to find a solution for your application. Cold, heat, wind, dust or humidity – standard semis, reefers, Super E-vans or liftgates – the ELIMINATOR II Series has you covered.

Another Frommelt Innovation

You'd expect nothing less from Frommelt, the top name in quality dock seals and shelters since 1951. Our durable products and proprietary designs make docks more productive and safer in every conceivable application.

A foam seal cannot fit every trailer equally. By design, it will encroach on some trailer openings – causing delays, inefficiency and spilled loads.

Traditional dock shelters have breakable wood and fiberglass frames that are susceptible to damage from trailer impact. Replacement costs are substantial.

Three models to meet your unique needs.

Every ELIMINATOR II product is fully impactable – for long life and low ownership cost. We can help you choose the model that best fits your application.

The Challenge: Full Access to Loads Without Shelter Damage

The Solution: ELIMINATOR™ II Shelter

The original soft-sided ELIMINATOR shelter pioneered the concept of impactable shelters. It can withstand the impact of off-center trailers, is effective in virtually any dock application, accommodates a wide range of trailers, and allows trucks to handle loads without interference. Side curtains fasten on with Velcro® and can be replaced in seconds. Or take them down in summer to reduce wear and ventilate your dock. Exclusive collapsible draft pads provide a tight seal at the lower corners. Adjustable C-style head curtain allows for varying trailer heights.

Removable side curtains are easy to detach and reattach. No bolts or other rigid attachment methods are utilized.

The Challenge: Wall Space Restrictions or Tight Door Centerlines

The Solution: Narrow profile side frames

Slim side frames make it possible to fit impactable Eliminator II shelters into spaces previously too tight for a dock shelter. Plus, you can avoid the expense of having to reposition lights, signs and electrical conduit before installing the shelters.

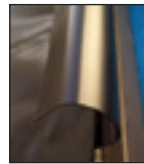

Loads can be fully accessed because nothing protrudes into the trailer opening.

The Challenge: Flexibility to Service Standard, Liftgate and Specialty Trailers at the Same Dock Position

The Solution: ComboShelter™ II Enclosure

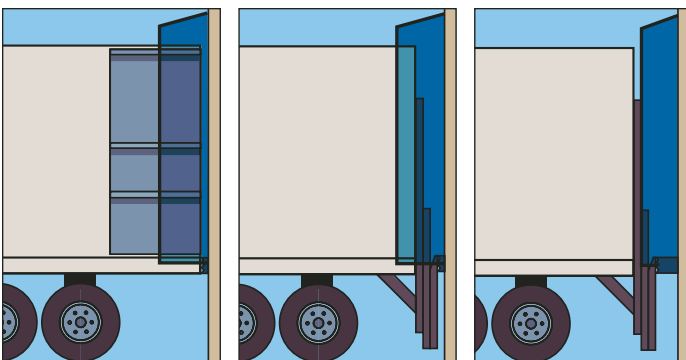

The ComboShelter II is the only product that effectively seals standard trailers, liftgate trucks and other specialty trailer designs, eliminating the need for dedicated dock positions to service each trailer type. Foam pads and traditional shelters can leave energy-wasting gaps as large as 15 sq. ft. on liftgate trailers. If you service liftgates often, you could be losing more than \$1,400 per year at each dock position. The extended projection of the ComboShelter II fully protects the trailer opening to keep weather out and energy in. Shelter curtains are specially reinforced to withstand the added wear due to use by multiple trailer designs, and the unique side frame design delivers greater flexibility to adjust to all trailer types.

The Challenge: Loading Efficiency with Maximum Energy Savings

The Solution: ELIMINATOR™-GapMaster™ II Sealing Shelter

For energy savings and also for keeping your people comfortable, no other shelter can match the Eliminator-GapMaster II. Its exclusive integral hooks block the hinge gaps on trailers with swing-out doors, closing what amounts to a 2-1/2 sq. ft. hole in your wall. Depending on climate, GapMaster shelters can save you up to \$1,000 per year in cooling and heating costs at each dock position. Rain, snow, windblown dirt and insects are also effectively sealed out by GapMaster curtains.

The ComboShelter II design provides effective coverage for standard trailers (left), as well as liftgate traffic or trucks with other rear-end assemblies (center). Ordinary shelters do not provide enough projection to seal liftgate traffic (right).

GapMaster hooks seal trailer hinge gaps that other shelters leave exposed, eliminating air gaps, white space and energy loss.

Customize your shelter.

Special options can help tailor ELIMINATOR™ II Series shelters to your requirements.

Fabrics that Last Long and Look Sharp

We'll help you choose the best fabric for your operation to ensure the longest possible life. All Frommelt fabrics are tested under the harshest conditions to ensure they meet tough durability standards.

Keep Your Workplace Safe and Dry

Frommelt innovations help keep your dock safe by channeling water away from the loading dock. An optional integral hood can work with the standard gutter to collect water that flows from the building face to the shelter hood and divert it to the sides – eliminating the need for a building canopy. For added protection, RainGuard™ header seals keep water from running off the top of the trailer onto your dock, people and products. RainGuard improves safety and helps eliminate product damage, even on docks with severe declines.

Create a High-Performance Dock System

ELIMINATOR II Series shelters are a key component of a safe and productive material transfer zone. Your Rite-Hite Representative will help you build an integrated system of dock seals and shelters, dock levelers, vehicle restraints, doors, controls and other equipment, to enhance your loading dock's performance and profits.

Start Counting Your Savings Now

Find out how much energy and money the ELIMINATOR II Series can save you. Your Rite-Hite Representative will perform a free Energy Loss Analysis that calculates the cost of the energy you may be losing today, as well as the cost savings and payback time on your shelter investment.

Contact your local Rite-Hite Representative or call us direct at 800-456-0600.

Count on Rite-Hite to improve safety and efficiency at your facility.

Only Rite-Hite offers you the industry's most experienced, most knowledgeable representatives who can help you gain a competitive edge by integrating our quality Rite-Hite products in your facility. Contact your Rite-Hite Representative for expert advice on:

- ▶ Minimizing hazards to improve safety
- ▶ Avoiding costly equipment breakdowns and delays
- ▶ Preventing product damage
- ▶ Cutting energy bills
- ▶ Extending equipment service life
- ▶ Saving on maintenance
